For example, convert from data which is in Eastings & Northings which are measured in Metres to Latitude & Longitude measurements

**Note:**
- Latitude (Y or Northing)
- Longitude (X or Easting)

Select the coordinate system GPS(WGS84) UTM as the top box with **Meters** selected
Select GPS (WGS84) deg as the lower box with **Dec Degrees** selected

You can type your numbers into the top box and the lower box will be filled in when you click on **Convert**

Your site will then display on the world map
